NM Alzheimer’s Disease Research Center Seminar

NEUROLOGICAL & VIRAL DISEASES IN HUMANS

Thursday, August 11, 2022  •  1:00 P.M.
MRN LARGE CONFERENCE ROOM • DOMENICI HALL
1101 YALE BLVD NE, ALBUQUERQUE, NM 87106

Goutam Gupta, PhD
Biolab, New Mexico Consortium

Human neurological disease can be caused by the expansion of DNA repeats in the human genome. Fragile X syndrome and myotonic dystrophy are two such examples of genetically inherited neurological disorders. Structural, molecular, and cellular biology experiments are performed to understand the mechanism of DNA repeat expansion in such diseases. Also similar experiments are performed to determine how the knowledge of virus-cell interactions can be exploited to develop diagnosis and therapy of COVID-19.

UNMHSC Center for Memory & Aging hosts a seminar series on Alzheimer’s disease and related dementia (ADRD) every month.

Interested in presenting your work related to AD/ADRD? Do you want to be added to the seminar mailing list? Please email iprestopnik@salud.unm.edu
